

Rosslyn Procurement Analytics

The fastest way to deliver procurement value and improved supplier performance.

The problem

In today's data-driven world, procurement teams need to make evidence-based decisions, quickly, to keep up with the competition. It's no longer acceptable to simply deliver cost savings to the business—CPOs are increasingly being asked to create more value from supplier relationships, mitigate supply chain risks and ensure contract compliance.

The solution

Rosslyn's Procurement Analytics platform is a user-friendly, self-service platform that supports procurement teams to dramatically speed up reporting time and productivity, making it the fastest way to deliver new sources of procurement value and improve supplier performance.

Key features

- The platform is designed to help procurement teams develop meaningful recommendations for the wider business and drive cost efficiencies throughout the supplier lifecycle.
- It does this by automating the resource-intensive processes of data aggregation, cleansing, categorization and enrichment from disparate ERP systems and other internal and external data sources.
- Accessed through a browser, Procurement Analytics features three main data-mining apps as standard, as well as an overview dashboard tailored to meet the needs of all users.
- The self-service nature of the platform allows users to dramatically speed up reporting time through automating traditionally manual data-collation tasks.
- With regularly refreshed data, the information available in the platform keeps pace with the reporting and analysis requirements of clients to ensure confidence in procurement recommendations throughout the business.

How it works

Information aggregation

Procurement Analytics includes a single, searchable database to analyze and investigate spend data and documentation. By aggregating multiple sources of procurement information including ERP systems, spreadsheets, contract repositories, supplier surveys and more, it delivers a 360° view of your supplier life cycle.

Insights

At high level, business stakeholders can review core KPIs and insights, such as spend by business area, levels of working capital and overall performance against savings targets.

For deeper insights, Procurement Analytics will provide critical line-item detail on suppliers (like preferred supplier usage and mapped supply chain risk) and category management insights (like spend under contract, total savings to date per category, unusually high volumes of POs per supplier).

Data security

- Security is built into every aspect of Procurement Analytics and maintaining the integrity of our customer's data is a key company objective.
- Once extracted, data is securely transferred to our data center utilizing the highest levels of security protocols.
- Client data is stored in geographically segregated data centers in the US and Europe. Data is always restricted to the geographies required.

- Rosslyn is accredited to ISO 27001 and ISO 9001. We welcome the opportunity to discuss any security concerns with prospective users of our platform and firmly believe that our existing client base are the best testament to our high levels of security and resilience.

Results

- **Data you can have confidence in** – With automated data cleansing and enrichment workflows built into the platform, you can trust the numbers you're seeing.
- **See the bigger picture** – Evaluate the wider context that is impacting spend and supplier relationships. The data mining apps included in Procurement Analytics enable users to map spend by multiple attributes in a single report view so you can see how trends are affected across countries, business functions, categories and much more.
- **Engage with the wider business** – Procurement Analytics is designed with collaboration in mind. Screen-share capabilities and custom report sharing options are built into the platform to support on-the-go collaboration. Data visualization and screenshot tools in the dashboard make communicating key insights easier than ever before.
- **A future-proof system** – The Procurement Analytics platform will adapt with you as your business objectives evolve. If you require more insight or a different focus, simply add more data sources into the platform, rather than relying on costly bolt-on modules.

About Rosslyn

Since 2005, Rosslyn has been at the forefront of helping organizations deliver accelerated business value through data insight. With thousands of users in over fifty countries, we empower organizations to automate critical business processes and analytics through simple, self-service tools.

Our portfolio of services ranges from AI-driven Procurement Analytics to Data Management.

Let us reveal the story within your data. Speak to a member of the Rosslyn team to find out how on **+44 020 3285 8008** or email us at **info@rosslyn.ai**.
