

Leveraging Data Analytics to Identify Supply Chain Risk

In collaboration
with Rosslyn Data
Technologies

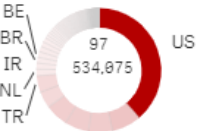

Leveraging the data

- Achilles and Rosslyn Data Technologies have teamed up to provide supplier network analytics.
- Leveraging Rosslyn Data Technologies' COVID-19 map, we are able to provide a combined view of the impact of COVID-19 and suppliers that are assured in the Achilles Network.¹

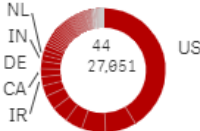

Figure 1: Rosslyn Data Technologies' COVID-19 Map, overlaid with the population of Achilles' Assured suppliers.

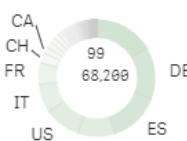

Total Active Cases
1,375,878

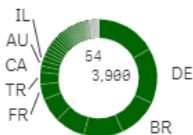

New Confirmed Cases
58,872

Total Recoveries
473,622

New Recoveries
25,586

What you need to know

Achilles has a global supplier network assured in the provision of thousands of products and services. We are actively working to connect those in need of supply with those who can provide it safely, ethically, and effectively.

We've already supported multiple governments and customers in identifying alternative sources of critical equipment, such as Personal Protective Equipment (PPE), and respirators or other breathing apparatus:

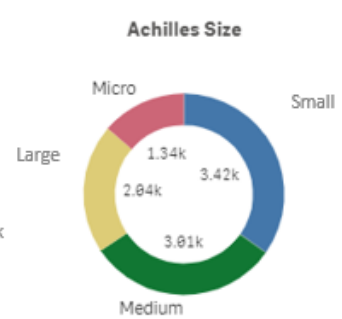

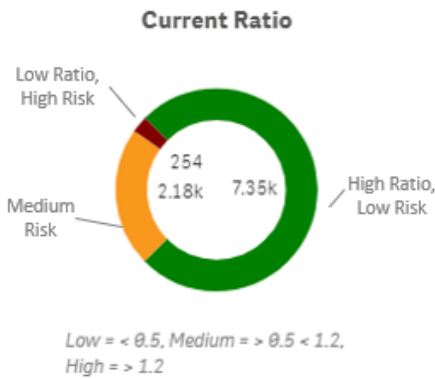

Greater Visibility

Now, through our work with Rosslyn Data Technologies, Achilles is able to provide greater visibility into supply chain risks across the globe.

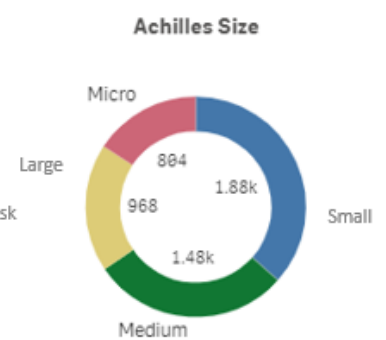

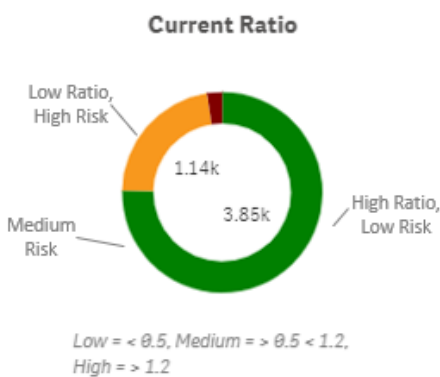

All Industries

Across the sample, 25% of suppliers have a current ratio of less than 1.2, putting them at financial risk if the revenue impact is prolonged.

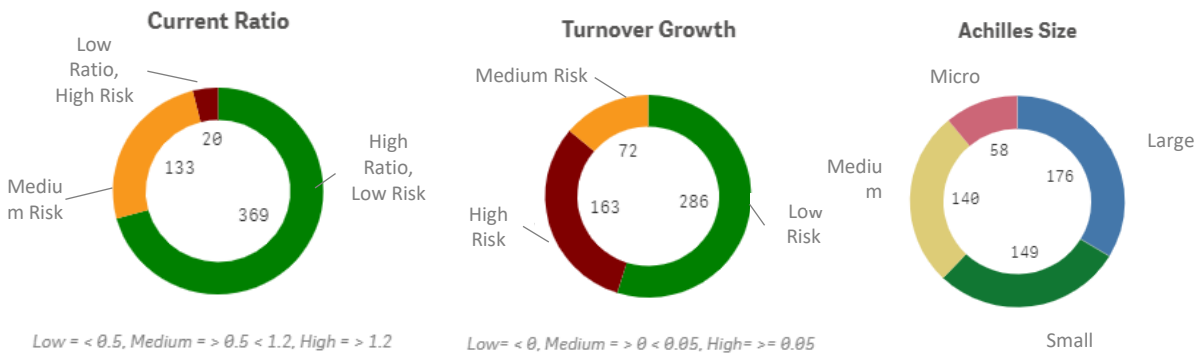

Utilities

The Utilities sector has the largest proportion of “Micro” suppliers.

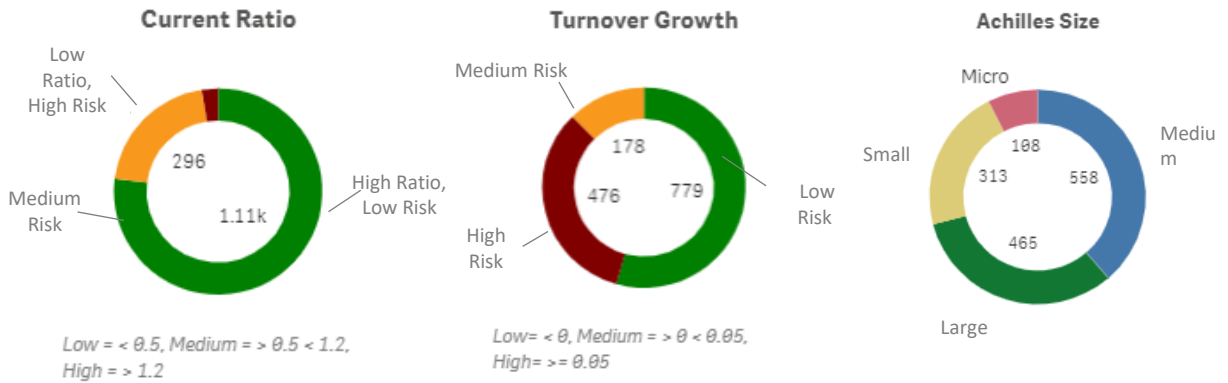

Facilities Management Services

The Facilities Management services shows a large proportion of SMEs facing high risk in Turnover Growth.

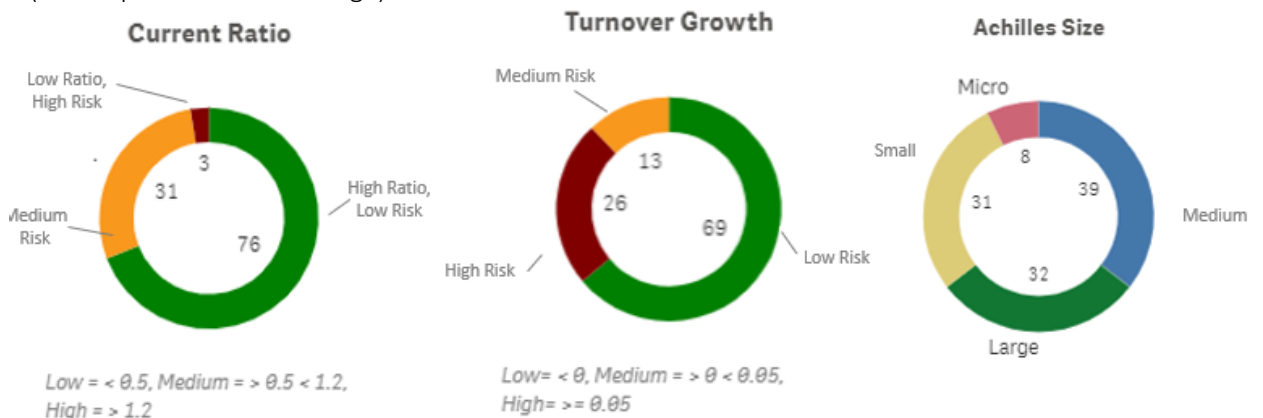

Construction

The Construction sector is slightly above average at 33% Turnover Growth.

Transport

The Transport sector has the lowest proportion of suppliers with negative Turnover Growth at 24% (as compared to 31% average).

Leveraging Data Analytics to Identify Supply Chain Risk

Do you need help identifying risk in your supply chain during COVID-19? Contact our dedicated support team through our [Help Desk](#).
